ARRANGEMENT FOR MEASURING THE SPECTRUM
WITHOUT OPTICAL METHODS. [1963] [20]p. 6 refs.
Order from SLA \$1.60

63-18723

Trans. of Optik (West Germany) 1962, v. 19, no. 7,
p. 357-368.

DESCRIPTORS: *Spectrum analyzers, Light, *Photo-
electric cells (Semiconductor).

Physical principles of a method are described for
measuring the spectral distribution of light intensities
by purely electronic methods, without applying any
well-known optical and spectroscopic equipment, such
as gratings, filters or prisms. The method requires
only a suitable photoelectric cell. The function of
intensity I is coordinated definitely with frequency of a
current-voltage function of the photoelectric cell.
(Physics--Optics, TT, v. 10, no. 11) (over)
